

£65 Boiler Service

Faulty boilers can be deadly.

Green Deal Solutions is offering a boiler service for £65 ... and that price includes VAT. And ... you can even call us up when you're boiler has broken down and get us out. You can book this on a breakdown and we'll fix your boiler and service it for £65 + parts if needed.

The benefits below of a regular and professional boiler service are well worth checking out. Without a twelve monthly service a boiler is not covered by a manufacturer's warranty or a workmanship warranty i.e. the labour to cover repairs.

Regular boiler servicing is an important part of maintaining your heating system. What does good boiler servicing involve? Below is a useful check-list to make sure your boiler is properly maintained.

Who We Are

About Us

Green Deal Solutions is a leading provider of energy efficiency technologies in the North West of England.

We can reduce your carbon footprint with biomass boilers, solar panels and all sorts of insulation.

With joiners, electricians, plumbers and building specialists in-house, every project in your home can be delivered with just one supplier. We have a page full of accreditations to provide you with the peace of mind that we can deliver to best practice and awesome quality.

We also offer finance at a staggeringly low rate of 7.9% APR. This beats all our competition and means we can offer you staged payments on anything from a new boiler / central heating system, double glazing or a conservatory, to a dream kitchen and much more! You can even choose your bathroom, bedroom and kitchen suites from any store you like and we will collect it for you and fit it! If you're using our amazing finance package, we'll even buy it for you!

Service check-list

The vast majority of boiler engineers recommend having an annual service for most of the household boilers in the market. Every professional undertaking the boiler service must be Gas Safe Registered (formerly-known as a CORGI certificate). Green Deal Solutions' boiler engineers all have these accreditations.

Each service should start with a visual check of the boiler. This establishes that the boiler, along with its installation and its positioning, complies with the set of rules defined in building regulations, electrical regulations, gas-safety regulations, water by-laws, installation instructions and with the British Standards. All engineers and services must comply with present legislation.

The pre-service check is the next part of the boiler service. At this check, the engineer will fire the boiler and then checks all the basic operations to identify any initial faults.

Following this, the boiler casing is then be removed (something only qualified and accredited engineers should undertake). With the casing removed, all the main components of the boiler system are then examined to visually inspect if they are clean and damage-free.

This check covers components such as the main burner and the main injector, plus the heat exchanger, the condense trap, the spark centre probe and the seals and the fans. At this point in the boiler service, there's then a checking of all electrics for overheating, all the inside surfaces are cleaned, all pipe work (water & gas) and joints are inspected, and very importantly, the engineer makes sure that the flue terminal is unobstructed.

"A good boiler service takes a bit of time. It involves taking the boiler apart, checking and cleaning all of the component parts, reassembling the boiler, testing it, and generally looking to spot any potential faults which may arise. It will also incorporate those safety checks on the flue gasses that are essential."

The gas valve will be checked next in this service using a flue gas analyser. This ensures the boiler's combustion system is working properly.

Tashio the Wizard made his screen debut in 2015!

If any fault is discovered during this test, the engineer will inform the home-owner of any additional costs that the repairs will incur. Green Deal Solutions only replaces parts with those also made by industry accredited suppliers, to ensure that they're 100% compatible.

Following on from these tests and inspections, the engineer then carries out a gas-tightness test to establish if there are any gas leaks in the system.

The casing of the boiler is then be carefully fitted back on.

Most experts concur that basic boiler service generally takes around half an hour.

The final stage for the engineer is to produce the service report. This is gives the home-owner the opportunity to compare what the engineer has stated they have done, with the work that has actually been completed.
